#### **DETAILED ACTION**

Applicants' arguments, filed 04/01/2009, have been fully considered. Rejections and/or objections not reiterated from previous office actions are hereby withdrawn. The following rejections and/or objections are either reiterated or newly applied. They constitute the complete set presently being applied to the instant application.

# **Continued Examination Under 37 CFR 1.114**

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 04/01/2009 has been entered.

### Response to Arguments

Applicant's arguments, see response, filed 04/01/2009, with respect to the amended claims have been fully considered and are persuasive. The rejections of the claims has been withdrawn.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Page 3

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 16, 19-22 and 28 are rejected under 35 U.S.C. 102(b) as being anticipated by USP 5,995,869.

The reference teaches the reduction of skin sensitization in electrotransport drug delivery. The method involves co-administration of a counter-sensitizing agent, comprising cis -urocanic acid or an analog thereof, with the drug delivered via electrotransport (abstract). The invention to provide such a method involves co-administering a counter-sensitizing agent along with the drug to be administered to a selected site on the skin or mucosa (claim 1).

Sensitization is a two-phase process involving biological mechanisms totally distinct from those observed in skin irritation. The first phase in sensitization reactions is the induction phase where the skin is initially exposed to a sensitizing agent, such as a drug or other antigen. During this phase, generally no skin reaction occurs. In the induction phase, the sensitizing drug or antigen is presented to T-lymphocytes by the Langerhans cells of the epidermis, either in situ or in the draining lymph node. As a consequence, cells which recognize the antigen, proliferate and differentiate.

The second, subsequent phase, following the establishment of contact allergy, is elicitation where a subsequent re-exposure (i.e., contact with the skin) to the sensitizing

Art Unit: 1612

drug or antigen results in a manifested skin reaction. This condition is known as allergic contact dermatitis.

Most drugs (i.e., about 70%) that are administered using electrotransport drug delivery devices carry a positive charge and are thus delivered from an anodic reservoir. Delivery of these drugs is typically effected from formulations having a pH in the range of about 5 to about 7 because the skin is most permeable to cations in this pH range.

# **Conclusion**

No claims are allowed

### Correspondence

Any inquiry concerning this communication or earlier communications from the examiner should be directed to CHRIS E. SIMMONS whose telephone number is (571)272-9065. The examiner can normally be reached on Monday - Friday from 7:30 - 5:00 PM EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Frederick Krass can be reached on (571) 272-0580. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
